Material Specifications

Finishes

- Longboard Products are available in a wide range of powder coated finishes.
- Custom solid colors are available upon request.
- Longboard woodgrains have a repeat pattern, shipped in sets mated back-to-back in each box. Install these
 as they come out of the box, as an A&B pattern staggering each plank approx. 1-2' (305-610mm) from the
 previous plank to achieve a random pattern aesthetic. It is recommended to create an onsite mock-up to
 produce a suitable pattern.
- Woodgrains NOT available for the Triple Bevel Plank
- All Castellation Planks in woodgrain require L&L attached.
- Longboard Products are not recommended for use on marine applications in direct contact with salt water.

Longboard extruded products are produced 1" (25mm) oversized, as one end is drilled for the coating process, and both ends have 1/2" (12mm) of masking tape (woodgrains only) which must be cut off for best results. Longboard Cladding is to be installed outboard of a weather resistant barrier, including all flashings, following code, and building requirements.

Material Ordering & Delivery

•	Packaging:	Planks are sold in box quantities: 6" Bevel Planks: 96 SQ FT/Box (8/24's, 192 LF) w. 90pcs Quick-Screen Clips included 4" Castellation Planks: 96 SQ FT/Box (12/24's) w. 144 Quick-Screen Clips included 8" Castellation Planks: 96 SQ FT/Box (6/24's) w. 72 Quick-Screen Clips included Components are sold individually by the 12' (3.7m) length.
•	Shipping:	Most Popular Finishes -ready to ship within 1 week Additional Finishes -ready to ship within 14 weeks Delivered on 24' (7.3m) long skids weighing up to 2000 lbs. A mechanical lift with forks is required on site to receive the order.
•	QC:	Always inspect the delivery for damage and contact LB ASAP if there are any issues: info@longboardproducts.com or 1-800-604-0343 and include your PO# and any pictures if possible. Mark the delivery receipt as "damaged" and accept the delivery as-is. Longboard is not responsible for the installation of blemished or damaged material.

Storage & Handling

Be sure to store the material flat, keep it dry, safe & secure and remain in unopened cartons until ready to be installed. **See Appendix for proper handling and care instructions.**

Cleaning Recommendations

- Initial and periodic cleaning for best looking product
- Basic methods use a combination of moderate water pressure, soft sponge/brush and a mild detergent (Safe for your hands, safe for the product)

№ NEVER use aggressive acid or alkaline cleaners on Longboard finishes. Do not use cleaners containing Trisodium Phosphate, Phosphoric Acid, Hydrochloric Acid, Hydrofluoric Acid, Fluorides, or any other compound that is known to react with metal.

*See Cleaning Guide for full requirements & cleaning schedule:

longboardproducts/resources/care-maintenance.com

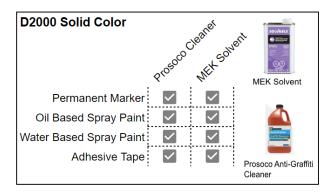

Warranty

Upon substantial completion of the project, register for warranty online here: longboardproducts.com/warranty
Registration is required for the warranty to be in effect.

To be covered by warranty Castellation Planks shall be installed vertically, to limit standing water **as per**Clause 4.4 of the Pinnacle Warranty Document

Graffiti Removal

Note: Cleaning the surface with a cleanser that is not diluted as per instructions may result in damage to the coating.

Components

Components (Typical)

Textured Wall planks are used in conjunction with T&G components. For all LB components go to longboardproducts.com.

Tools/Cutting/Fastening

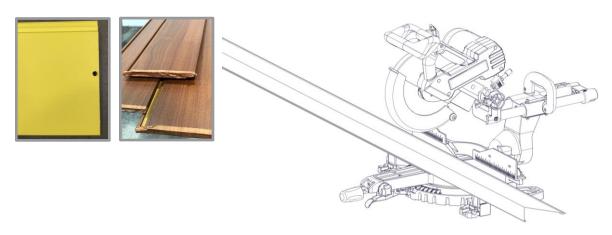

ToolsCommonly used tools for Cladding install.

Table Saw with Carbide Metal Blade Non-ferrous 60- 80T (for cutting aluminum)	Miter Saw with Carbide Metal Blade Non-ferrous 60- 80T (for cutting aluminum)	Cordless Drill with clutch	Jig Saw (for protrusions)
			*Length, thread and point to suit substrate
Rubber Mallet (or Hammer)	Level	Hole Saw (for lighting fixtures)	#8 Pan Head Screws

Cutting

⚠ Always be sure to wear appropriate PPE: eye & hearing protection.

Cut planks using a Miter Saw and Table Saw, always allowing for expansion & contraction. Trim the taped/drilled ends of all stock length material by at least 1/2" (12mm) each end and discard.

Fastening

Fasteners must be corrosion resistant and comply with all local building codes.

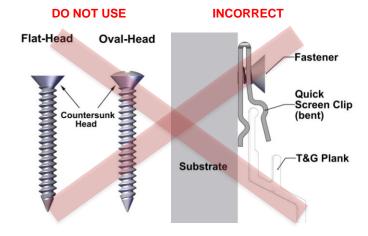

All fasteners should be suitable for exterior use and be compatible with the substrate type. Fasteners should be anchored into a solid secure framing member, blocking, furring, or strapping. For vertical applications when the framing member is not available, install diagonal furring strips or horizontal metal strapping to securely fasten planks.

Perimeter components should be hard fastened every 16" (406mm) O.C. max. directly through the flange using #8 pan-head screws (supplied by others). These components should be fastened within 8" (203mm) of the end for secure fastening.

Planks & starter components are secured using Longboard Quick-Screen Clips fastened to the substrate every 16" (406mm) O.C. max using #8 pan-head screws (supplied by others).

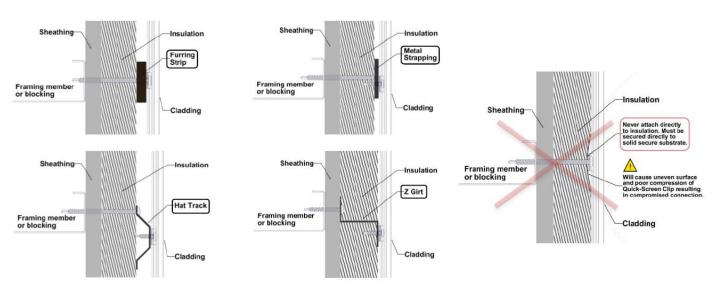

Always consult the project engineer, architect or authority having jurisdiction to understand the project specific fastening requirements.

Fastener types RECOMMENDED CORRECT Pan-Head Fastener Quick Screen Clip *Length, thread and point to suit substrate

Fastening options onto exterior insulation

*Never direct to insulation. Must be secured directly to solid secure substrate.

Framing requirements

Always consult the local building authority and follow local building code requirements. When attaching to **Hitch Cladding attachment System** refer to Hitch Install Guide for requirements.

Wood Framing

• Size: 2x4 minimum

• Spacing: 16" O.C. spacing

Metal Framing

Gauge: 18 ga. minimumSpacing: 16" O.C. spacing

Furring recommendations

Hitch Girts

Attached back to wood or metal framing/blocking.

• Sizes: 3/4", 1"

Spacing: 16" O.C. spacing

Wood Furring

Attached back to wood or metal framing/blocking.

• Size: 3/8" minimum

• Spacing: 16" O.C. spacing

Metal Furring/Strapping

Attached back to wood or metal framing/blocking.

• Size: 18 ga. minimum

Spacing: 16" O.C. spacing

Concrete/CMU

Wood or metal furring is recommended over concrete and CMU.

Wood Furring:

• Size: 2x2 minimum

• Type: Pressure treated lumber

• Spacing: 16" O.C. spacing

Metal Furring:

• Size: 18 ga. minimum

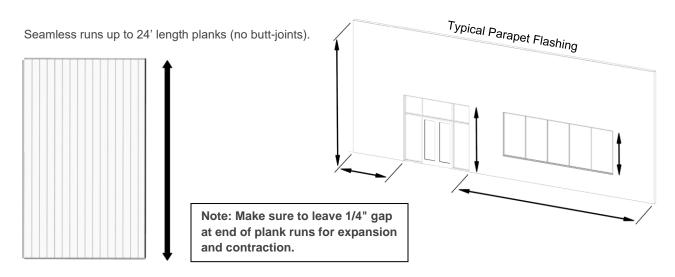

• Type: Hat channel, Stud, or Z-Girt.

• Spacing: 16" O.C. spacing

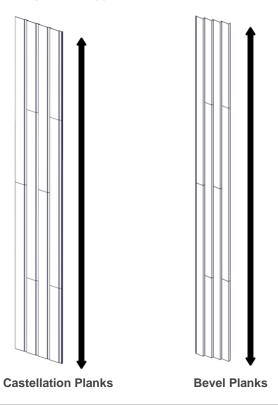

System Install

Perimeter and field area limitations

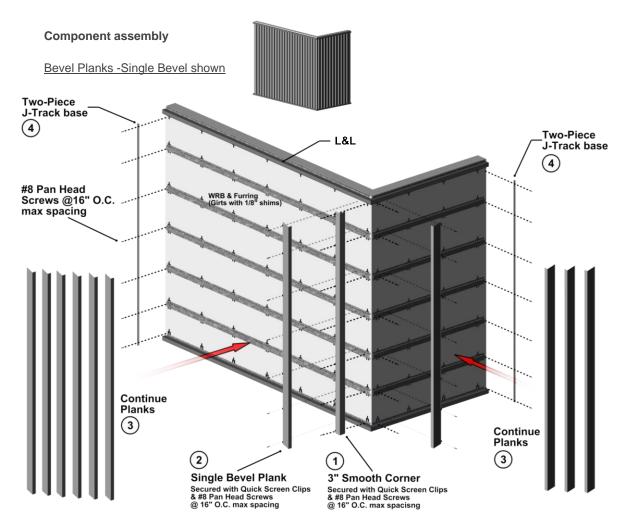

- Measure and layout your wall area to consider plank & component alignment with fixtures, penetrations, and adjacent walls, for desired appearance. Consider using butt-joints along runs to minimize waste.
 Apply the same methodology for horizontal Bevel Plank installations.
- To be covered by warranty Castellation Planks shall be installed vertically, to limit standing water as per Clause 4.4 of the Pinnacle Warranty Document

Runs up to 40' length with staggered butt-joints.

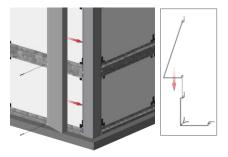

Step 1

Install 3" Smooth Corner with Quick Screen Clips & #8 Pan Head Screws @16" O.C. max spacing. Hard fasten only one point preferably near the center of each plank.

Alternative starting option is to use Starter strip at the edge of the wall(s) fastening #8 Pan Head Screws every 16" O.C. max spacing.

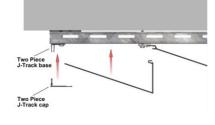

Step 2 & 3

Place the planks fully engaging the tongue. Fasten with Quick Screen Clips & #8 Pan Head Screws @16" O.C. max spacing. Hard fasten only one point preferably near the center of each plank. It is good practice to check your installation every 2-3 rows for level/plumb & flat or straight for best results. Ensure there is sufficient room for expansion & contraction of each Plank.

Confirm cut off Taped/Drilled plank ends (1/2" each end).

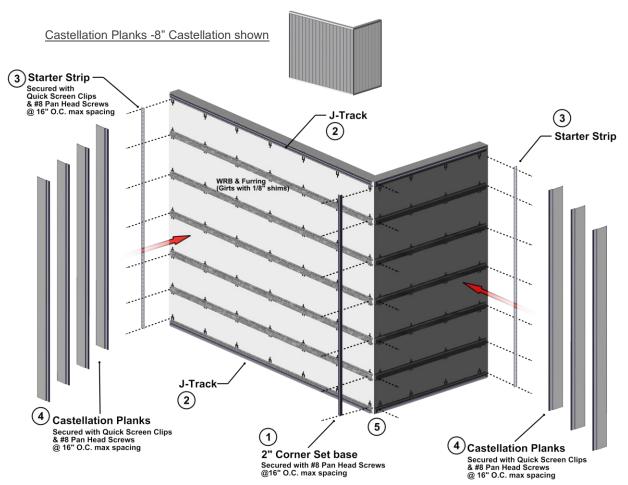

Step 4

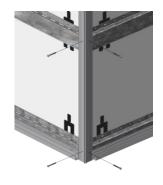

Before the last Plank, install Two Piece J-Track base fastening 16" O.C. typ.

When terminating, confirm the trim component caps will cover the last Plank and adjust accordingly to suit the profile.

When all Planks are installed, finish off the trims with caps from two-piece sets.

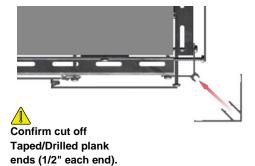

Step 1 & 2

Install 2" Corner Set base and J-Track (or Two Piece J-Track) with #8 Pan Head Screws @16" O.C. max spacing.

Alternative starting option is to use Starter strip at the edge of the wall(s) fastening #8 Pan Head Screws every 16" O.C. max spacing.

Step 3

Install Starter Strip or Starter J-Track at the edge of walls using Quick Screen Clips & #8 Pan Head Screws @16" O.C. max spacing. Hard fasten only one point preferably near the center of each plank. See Appendix for Starter Strip loading.

Step 4 -See Page 12 if installing Castellation planks with L&L.

Place the planks fully engaging the tongue in the Starter. Fasten with Quick Screen Clips & #8 Pan Head Screws @16" O.C. max spacing. Hard fasten only one point near the center of each plank.

It is good practice to check every 2-3 rows for level/plumb & flat or straight for best results. Ensure there is sufficient room for expansion & contraction of each Plank.

Step 5

When terminating confirm the trim component caps will cover the last Plank and adjust accordingly to suit the profile. Where terminating cut planks, provide a positive stop approximately every 16" (406mm).

When all Planks are installed finish off the trims with caps from two-piece sets.

Castellation Planks -with Link & Lock

Plank Install

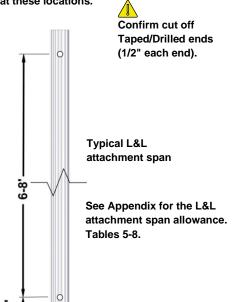

To prepare Castellation Planks for Link & Lock install:

Step 1

Measure & cut the castellation plank to length and lay plank into place. Adjust for expansion & contraction and confirm that trim components cover the plank (fasten with screw to temporarily hold in place if needed).

Mark out the L&L attachment points at the castellation groove, remove and drill out the plank at these locations.

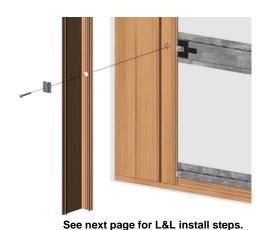

Step 2

Replace plank, center the holes at the attachment points and install with Quick Screen Clips, #8 Pan Head Screws and 1/16" Shims. The shims are used to support the L&L install at the attachment point.

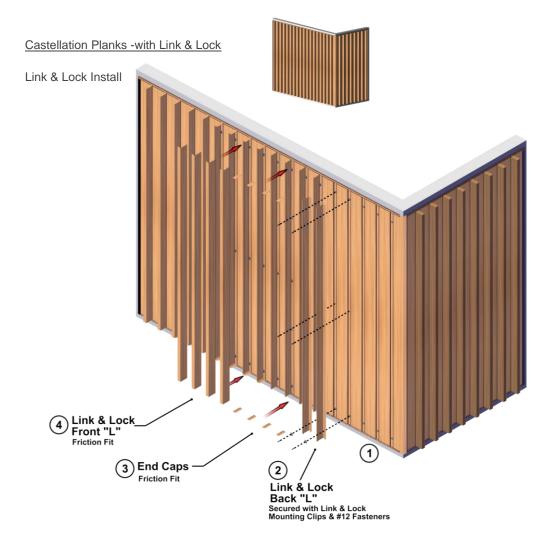

Purchased separately.

Repeat these steps for the rest of the Castellation Planks or mark and drill for the desired measurement.

Note: To hard fasten 1 location per length, omit the drilled hole at that location and hard fasten.

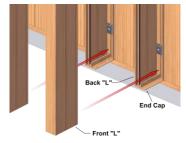

Step 1

Measure, mark and drill out the L&L back "L" for the 1/2" holes to match the Castellation planks.

Step 2

Secure the Back "L" to the Castellation Planks with Link & Lock Mounting Clip & #12 Fasteners. Make sure it aligns and fits into the groove correctly and is anchored into the center of the drilled-out holes. Leave gap for expansion & contraction and End Cap allowance.

Step 3

Install End Caps top & bottom into Back "L" sliding them into the screw chase.

Step 4

Install Front "L" locking it into place. It is good practice to check components for a tight fit.

Details

Butt-Joints for Textured Planks

- Consider using butt-joints along runs to minimize waste.
- Men installing staggered butt-joints, hard-fasten the two planks at the butt-joint to ensure joints do not open up. Fasteners should be placed at the uppermost location of the plank flange, to not interfere with the next plank engaging the tongue and groove properly. At the butt-joint, fasteners should be anchored into a 4" length of Starter Strip.
- On exposed cuts such as butt-joints, trim ends or similar, use touch-up paint pens (purchased separately) to finish the ends of the two (2) planks at the butt-joint.
- DO NOT install more than one (1) butt-joint between two components
- DO NOT hard-fasten a plank to a component trim, as this will restrict its ability to expand & contract into the component.
- If no butt joints along the length, it is good practice to hard-fasten each plank directly through the flange near the center, to keep the planks from migrating.
- DO NOT hard-fasten more than one (1) location per plank.
- Hard fasten only:

Situation Location

No butt-joints: -Near the center of planks

Butt-joints: -At the joints

Proper Handling of Longboard Products

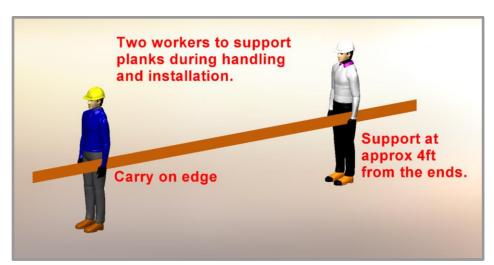

To help avoid injury and product damage, Longboard products require proper handling to and from storage areas during installation. When carrying or installing any products it is recommended that they be moved or carried by at least two people with each support point approximately 4ft from the ends. Carrying products without proper support can cause excessive bending which may damage the appearance or finish of the product. Any short cut lengths should also be carried on edge while supporting the material. See below for details.

- Always inspect the delivery for damage and contact LB ASAP if there
 are any issues: info@longboardproducts.com or 1-800-604-0343 and include your PO# and any pictures if
 possible. Longboard is not responsible for the installation of blemished or damaged material.
- Be sure to store the material flat, keep it dry, safe & secure and remain in unopened cartons until ready to be installed.
- Always wear appropriate PPE when handling products.
