LONGBOARD®
INSPIRING ARCHITECTURE

Tongue and Groove Soffit

Installation Guidelines

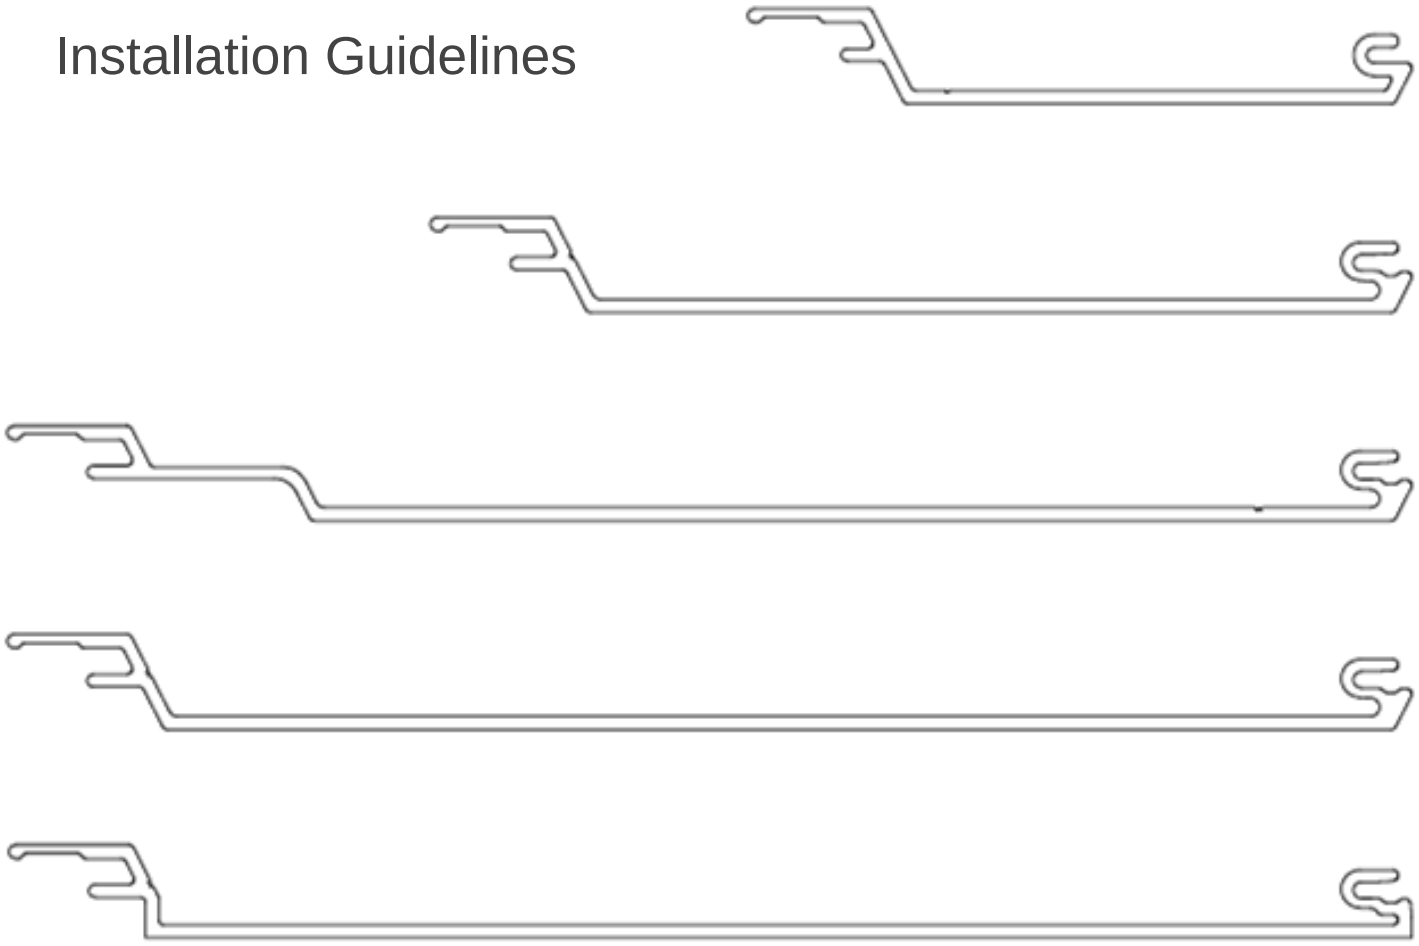

Table of Contents

Material Specifications

Finishes

- Longboard Products are available in a wide range of powder coated finishes.
- Custom solid colors are available upon request.
- Longboard woodgrains have a repeat pattern, shipped in sets mated back-to-back in each box. Install these as they come out of the box, as an A&B pattern staggering each plank approx. 1-2' (305-610mm) from the previous plank to achieve a random pattern aesthetic. It is recommended to create an onsite mock-up to produce a suitable pattern.
- Longboard Products are not recommended for use on marine applications in direct contact with salt water.

Longboard extruded products are produced 1" (25mm) oversized, as one end is drilled for the coating process, and both ends have 1/2" (12mm) of masking tape (woodgrains only) which must be cut off for best results.

Expansion & Contraction

Planks & components expand & contract 1/4" (6mm) over 24' (7.3m) in all directions, measured over a 30℃ (54℉) temperature range. Due to this range of movement, the following expansion components should be installed perpendicular to planks every:

- 24' (7.3m) max[1] Perpendicular to Planks: Traditional Flat Reveal, U-Reveal Set

[1]Note: 40' (12.2m) max if using staggered butt-joints.

Other options (Perpendicular to Planks only)

- 12' (3.7m) -Craftsman U-Reveal Set
- 6'- 8' (1.8- 2.4m) -Precision Flat Reveal

When using expansion components, each plank must terminate into a minimum of one (1) component to allow for expansion & contraction.
See: Appendix for tables of expansion/contraction calculations per foot/meter of material.

Material Ordering & Delivery

- Packaging: Planks are sold in box quantities:
  6" Planks: 96 SQ FT/Box (8/24's, 192 LF) w. 90pcs Quick-Screen Clips included
  4" V-Groove: 96 SQ FT/Box (12/24's, 288 LF) w. 144 Quick-Screen Clips included
  2 1/2" V-Groove: 20 SQ FT/Box (8/12's, 96 LF) w. 45 Quick-Screen Clips included
  Components are sold individually by the 12' (3.7m) length.
- Shipping: Most Popular Finishes - ready to ship within 1 week
  Additional Finishes - ready to ship within 14 weeks
  Delivered on 24' (7.3m) long skids weighing up to 2000 lbs. A mechanical lift with forks is required on site to receive the order.
- QC: Always inspect the delivery for damage and contact LB ASAP if there are any issues: info@longboardproducts.com or 1-800-604-0343 and include your PO# and any pictures if possible. Mark the delivery receipt as "damaged" and accept the delivery as-is. Longboard is not responsible for the installation of blemished or damaged material.

Storage & Handling

Be sure to store the material flat, keep it dry, safe & secure and remain in unopened cartons until ready to be installed. **See Appendix for proper handling and care instructions.**

Cleaning Recommendations

- Initial and periodic cleaning for best looking product
- Basic methods use a combination of moderate water pressure, soft sponge/brush and a mild detergent (Safe for your hands, safe for the product)

⚠NEVER use aggressive acid or alkaline cleaners on Longboard finishes. Do not use cleaners containing Trisodium Phosphate, Phosphoric Acid, Hydrochloric Acid, Hydrofluoric Acid, Fluorides, or any other compound that is known to react with metal.

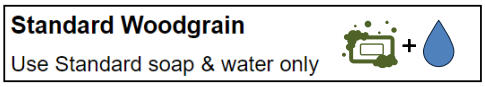
See Cleaning Guide for full requirements & cleaning schedule:
longboardproducts/resources/care-maintenance.com

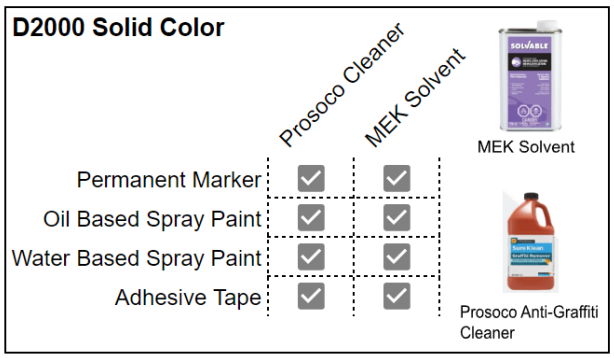
Warranty

Upon substantial completion of the project, register for warranty online here: longboardproducts.com/warranty

⚠Registration is required for the warranty to be in effect.

Graffiti Removal





Note: Cleaning the surface with a cleanser that is not diluted as per instructions may result in damage to the coating.

Components

Components (Typical)

T&G Soffit system consists of many components used in conjunction with each other to create a seamless look. For all LB components go to longboardproducts.com.

Tools/Cutting/Fastening

Tools

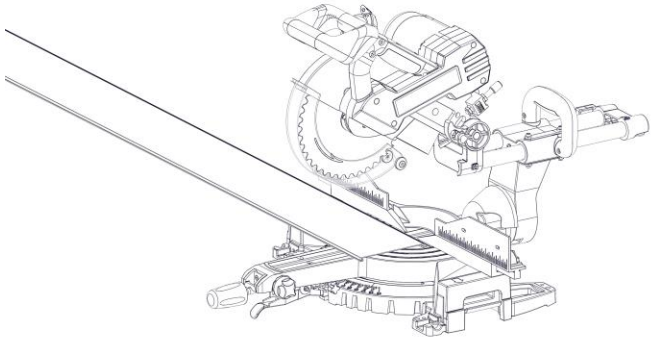
Commonly used tools for T&G Soffit install.

			Table Saw with Carbide Metal Blade Non-ferrous 60-80T (for cutting aluminum)	Miter Saw with Carbide Metal Blade Non-ferrous 60-80T (for cutting aluminum)	Cordless Drill with clutch	Jig Saw (for protrusions)
			 *Length, thread and point to suit substrate
Rubber Mallet (or Hammer)	Level	Hole Saw (for lighting fixtures)	#10 Pan Head Screws (by others)

Cutting

⚠ Always be sure to wear appropriate PPE: eye & hearing protection.

Cut planks using a Miter Saw and Table Saw, always allowing for expansion & contraction. Trim the taped/drilled ends of all stock length material by at least **1/2“ (12mm) each end** and discard.



⚠ DO NOT Install Planks or Trims without trimming the ends.

Fastening

⚠ Always consult the project engineer, architect or authority having jurisdiction to understand the project specific fastening requirements.

Typical spacing:
-using **#10 Fasteners (by others)**

Trim components including Starter Strip

- **16” (406mm) O.C.**
- **24” (610mm) O.C. (for direct to truss)**

Planks
Standard wind loads

- **32” (813mm) O.C.**
  (Quick-Screen Clips included with order for this spacing)

Higher wind loads

- **16” (406mm) O.C.**
  (Add extra Quick-Screen Clips to order)

See **Appendix for fastening specs:**
Fastening to Structure -Table 3
Fastening to Sheathing Tables 4-6

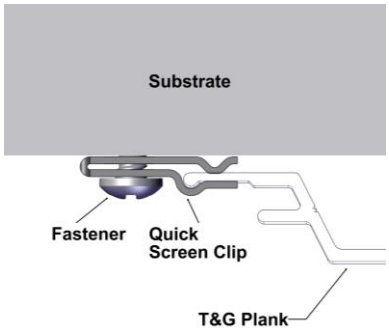
Framing/Furring requirements
Always consult the local building authority and follow local building code requirements.
When attaching to **Hitch Cladding attachment System** refer to Hitch Install Guide for requirements.
See **Appendix for framing/furring/sheathing specs: Tables 3-6**

Fastener types

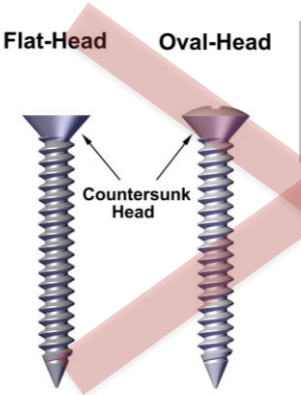
RECOMMENDED

*Length, thread and point to suit substrate

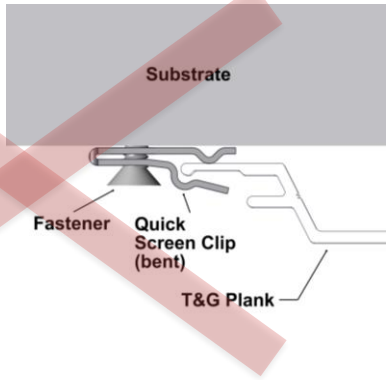
CORRECT

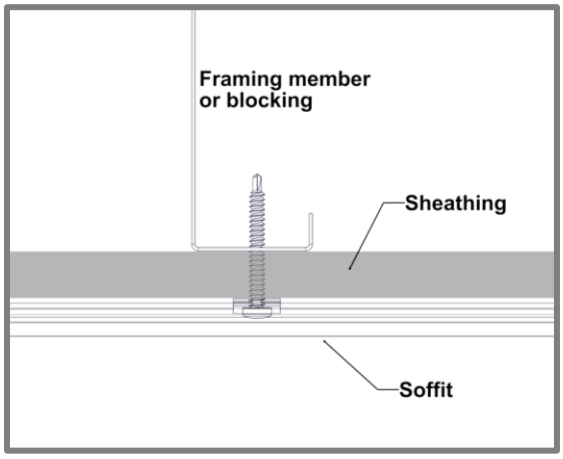


DO NOT USE

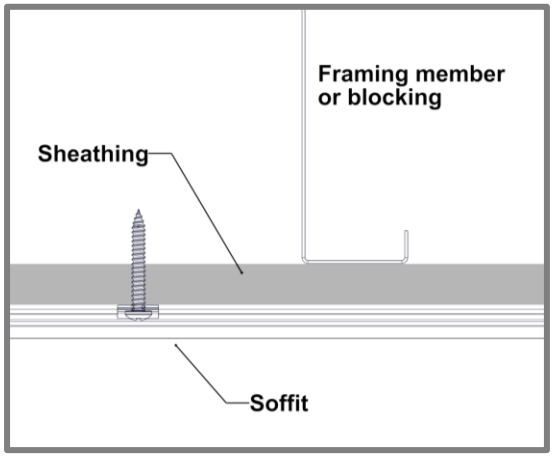


INCORRECT





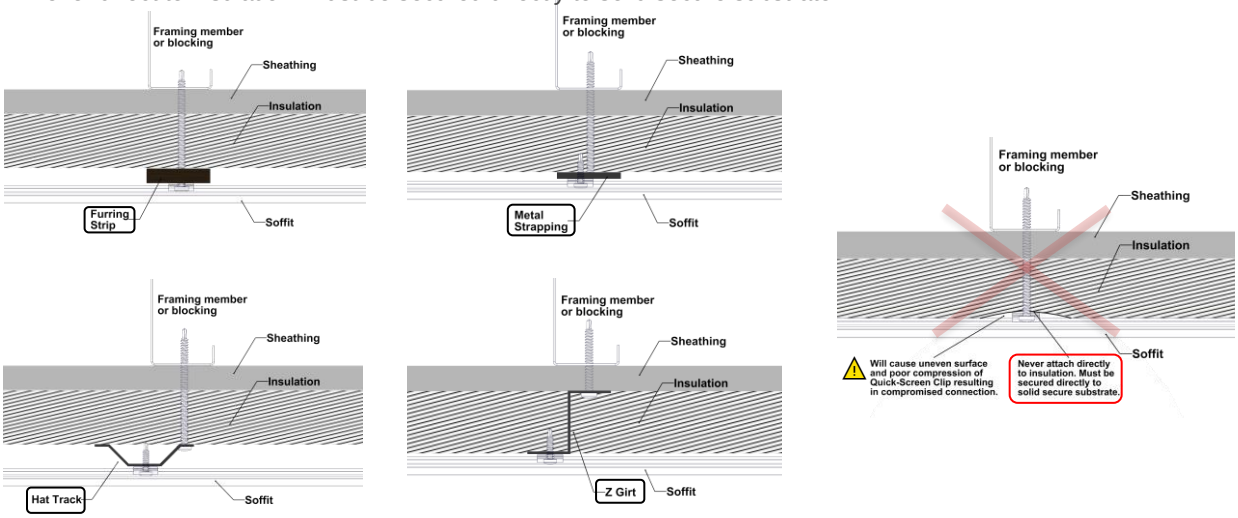
Fastening to Structure
(see Table 3 for specs)



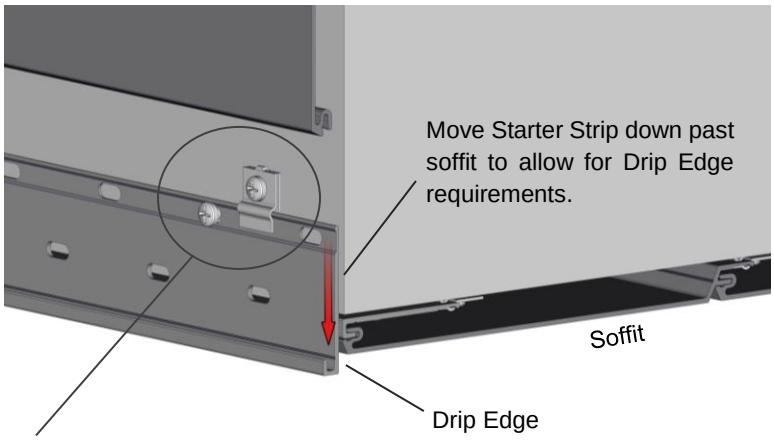
Fastening to Sheathing
(see Tables 4-6 for specs)

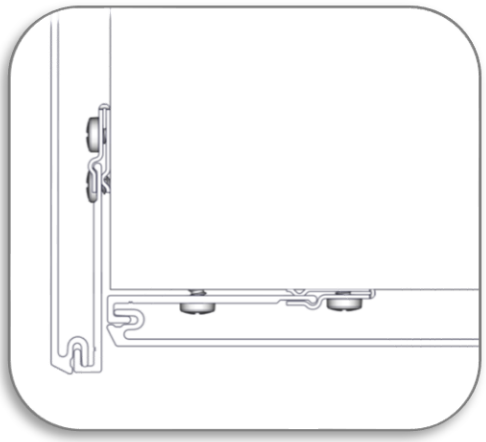
Fastening options onto exterior insulation

*Never direct to insulation. Must be secured directly to solid secure substrate.



Fastening option for Drip Edge condition





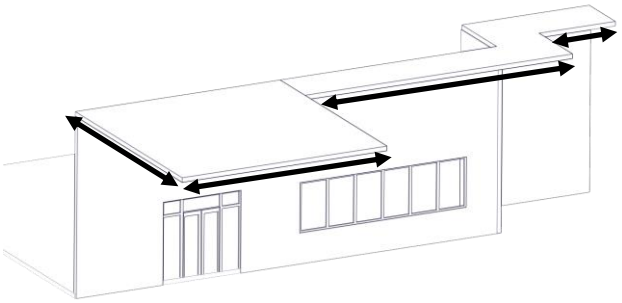
Note: For Drip Edge condition, Starter Strip requires two anchors at each fastener location (One with Quick Screen Clip and one at top-point sotted hole)

System Install

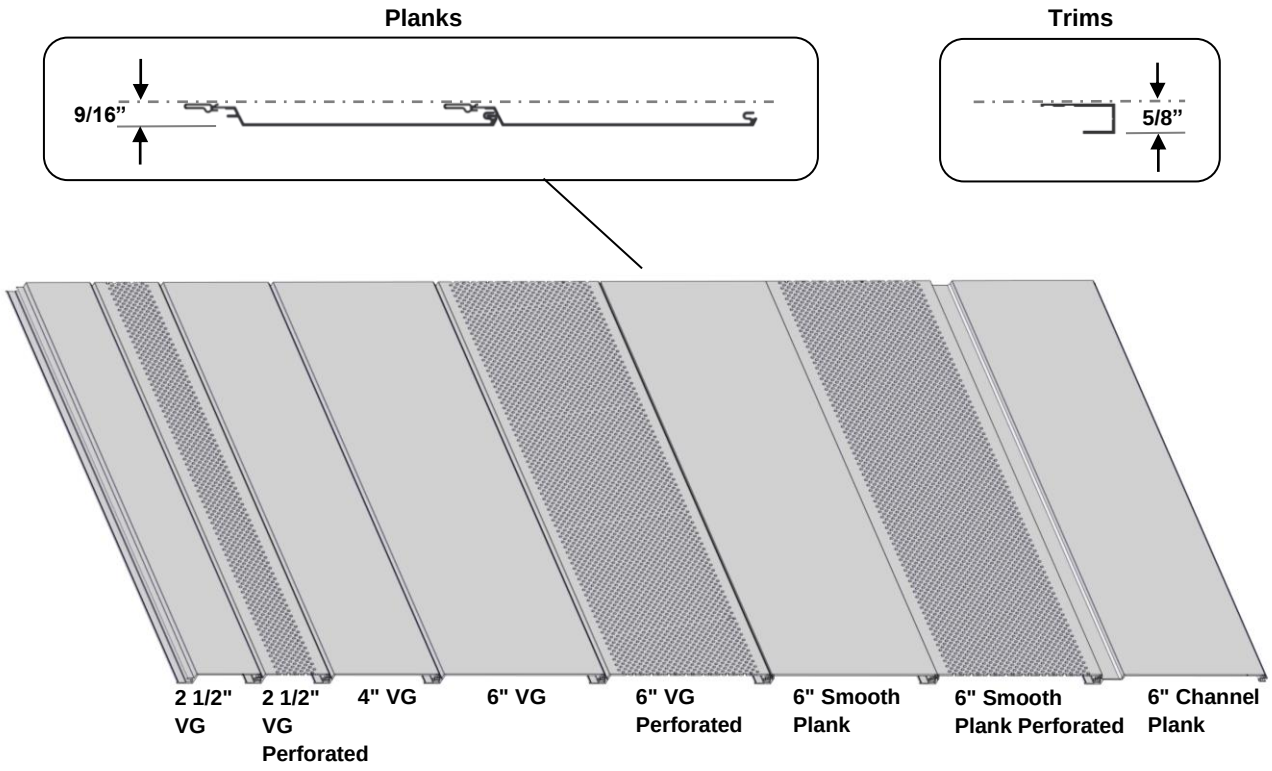
Perimeter and field area limitations & venting

- Measure and layout your soffit area to consider plank & component alignment with fixtures, penetrations, and adjacent walls and edges, for desired appearance. Consider using butt-joints along runs to minimize waste.
- Longboard system typical dimensions:

Planks width	- 2 1/2” (64mm), 4” (102mm), 6” (152mm)
Perforated Planks width	- 2 1/2" (64mm), 6” (152mm)
Planks and Quick-Screen Clips depth	- 9/16” (14mm)
Trim Components depth	- 5/8” (15mm)

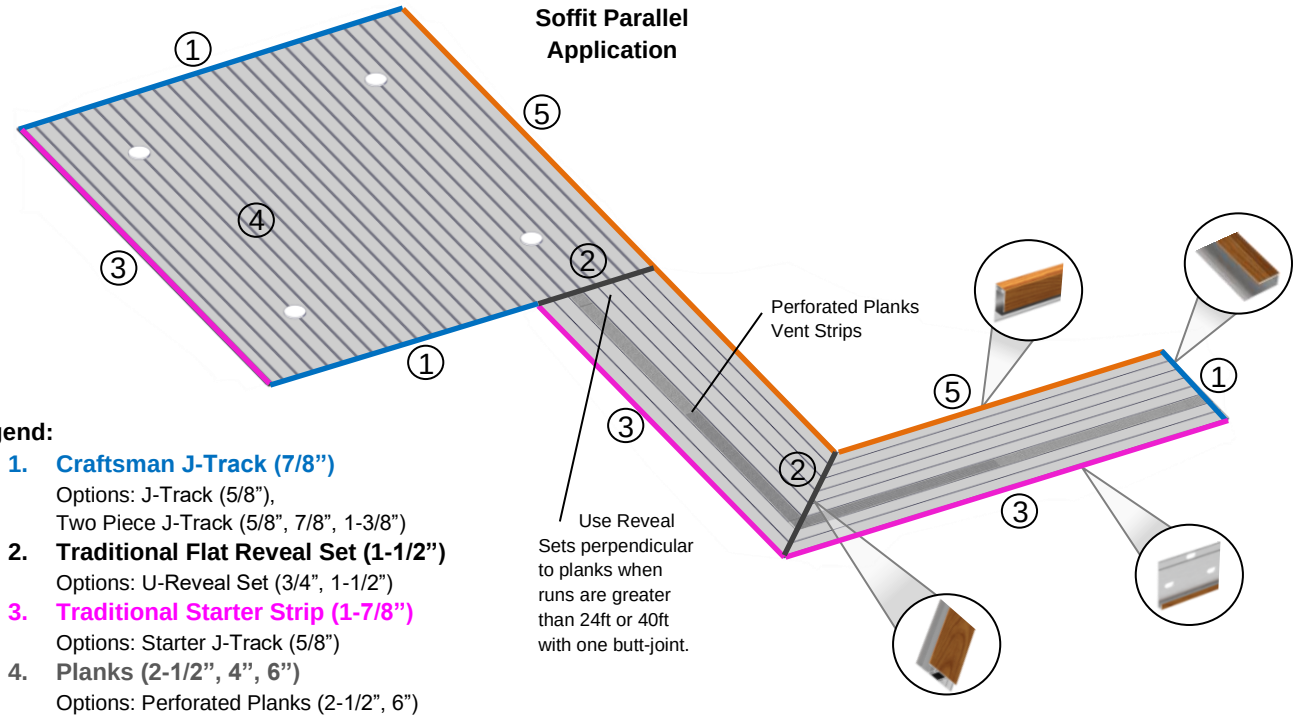


Perforated Planks	NFA (open area)	Hole size(mm)	Lengths
2 1/2" V-Groove	15%	3	12’
6” V-Groove	21%	3	12’/24’
6” Smooth Plank	21%	3	12;/24’



Component layout

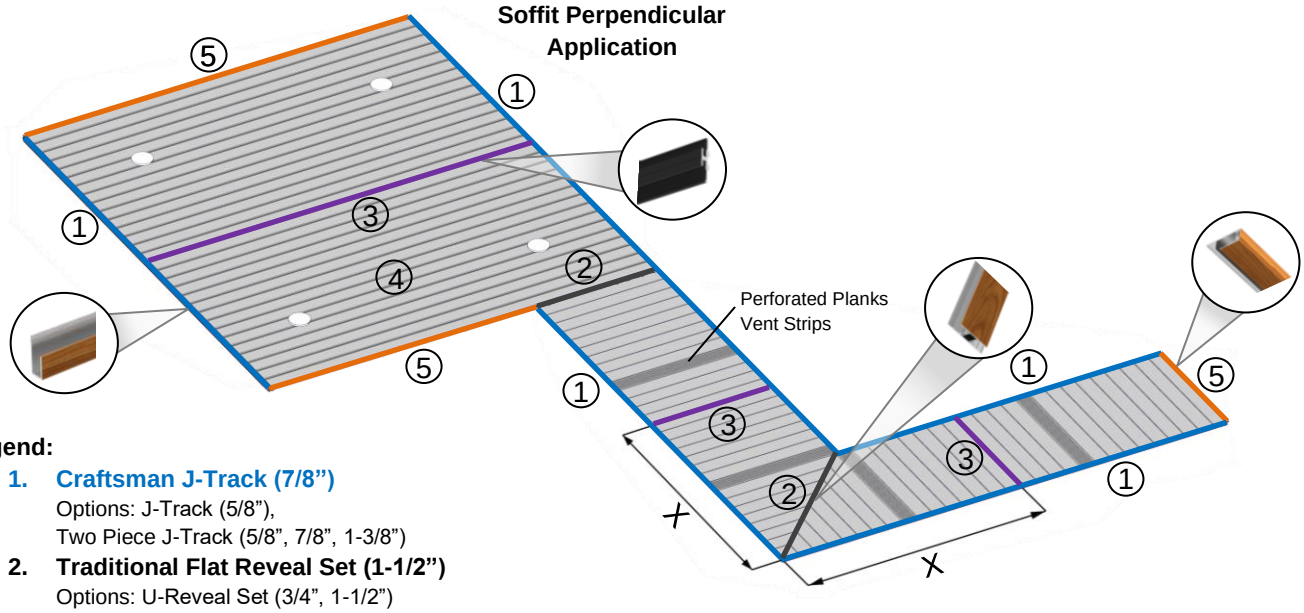
Soffit Parallel Application



Legend:

1. **Craftsman J-Track (7/8”)**
   Options: J-Track (5/8”),
   Two Piece J-Track (5/8”, 7/8”, 1-3/8”)
2. **Traditional Flat Reveal Set (1-1/2”)**
   Options: U-Reveal Set (3/4”, 1-1/2”)
3. **Traditional Starter Strip (1-7/8”)**
   Options: Starter J-Track (5/8”)
4. **Planks (2-1/2”, 4”, 6”)**
   Options: Perforated Planks (2-1/2”, 6”)
5. **Craftsman Termination Set (7/8”)**
   Options: Termination Set (5/8”, 1-3/8”)

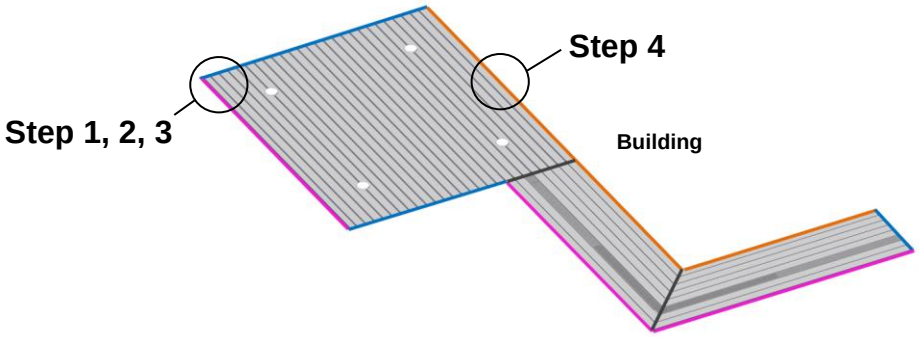
Soffit Perpendicular Application

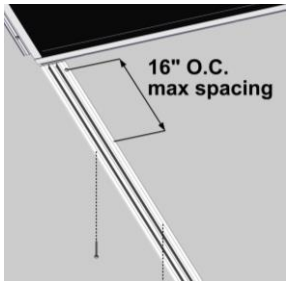


Legend:

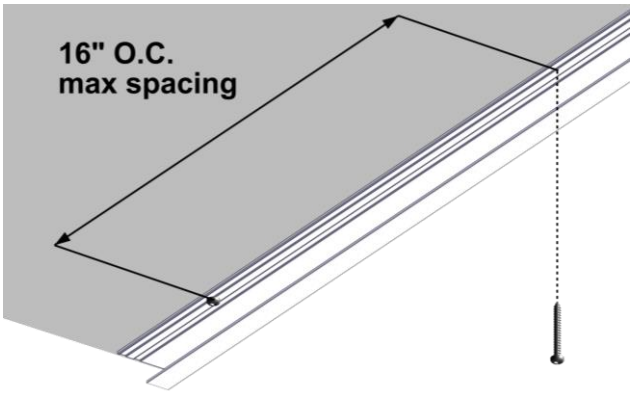
1. **Craftsman J-Track (7/8”)**
   Options: J-Track (5/8”),
   Two Piece J-Track (5/8”, 7/8”, 1-3/8”)
2. **Traditional Flat Reveal Set (1-1/2”)**
   Options: U-Reveal Set (3/4”, 1-1/2”)
3. **Traditional Back-to-Back Starter Strip (1-1/4”)**
   Options: Starter Strip at soffit edge
4. **Planks (2-1/2”, 4”, 6”)**
   Options: Perforated Planks (2-1/2”, 6”)
5. **Craftsman Termination Set (7/8”)**
   Options: Termination Set (5/8”, 1-3/8”)

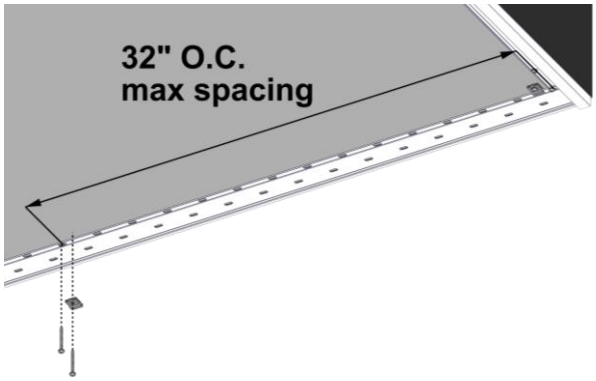
Install Steps – Parallel to the building





Flat Reveal
(Only if required for long runs)
Install the Flat Reveal Set base at the desired plank lengths.



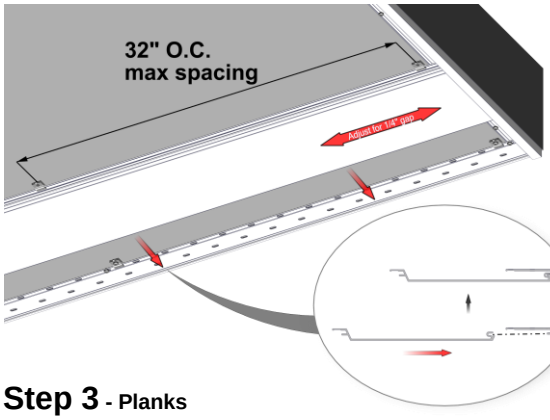


Step 1 - J-Track

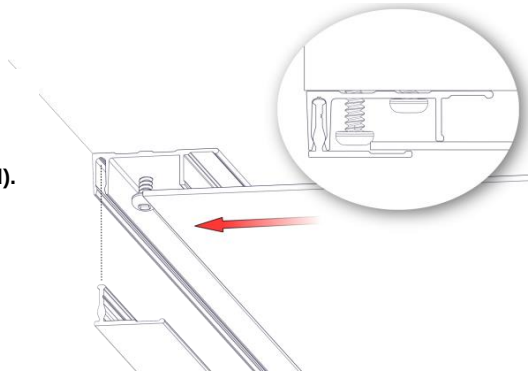
Install J-Track or Two-Piece J-Track perpendicular to Planks (e.g.: sides of soffit areas), or around penetrations or cutouts. Fasten every 16" O.C. with #10 Pan Head Screws. Trims can be mitered for a clean corner look.

Step 2 - Starter Strip

Install the Starter Strip along the edge of the soffit(s), fastening every 32" O.C. max with Quick Screen Clips & #10 Pan Head Screws (See Table 3-6 for wind loading). Notch the Starter J-Track to suit the trim component if required.



Cut off Taped/Drilled plank ends (1/2" each end).



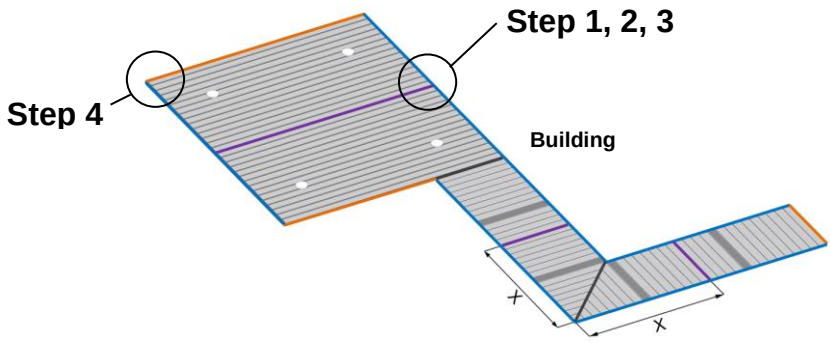
Step 3 - Planks

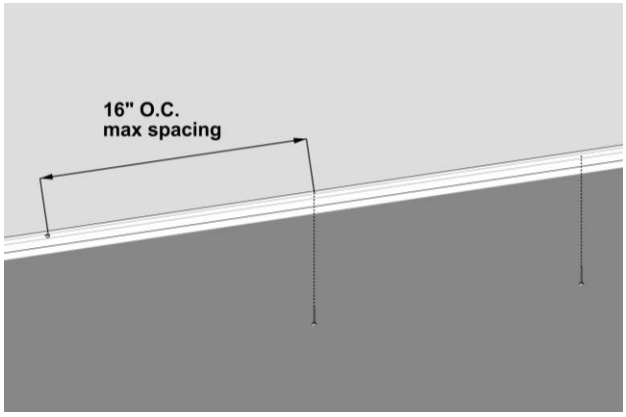
Place the planks onto the tongue of the Starter Strip, fully engaging tongue. Fasten with Quick Screen Clips & #10 Pan Head Screws @32" O.C. max spacing (See Tables 3-6 for wind loading). Hard fasten only one point preferably near the center of each plank. It is good practice to check your installation every 2-3 rows for level/plumb and flat or straight, for best results. Ensure there is sufficient room for expansion & contraction, also confirming component caps will cover.

Step 4 - Termination

Before the last Plank, install Termination Set base fastening 16" O.C. typ.
Confirm the trim component caps will cover the last Plank and adjust accordingly. Where terminating cut planks, provide a positive stop approximately every 16" (406mm). Finish off the trims with caps from two-piece sets.

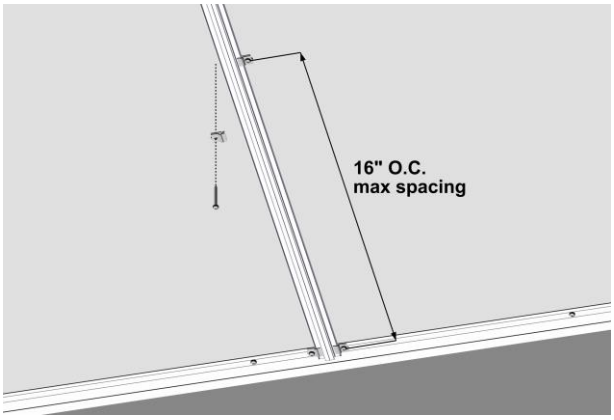
Install Steps – Perpendicular to the building





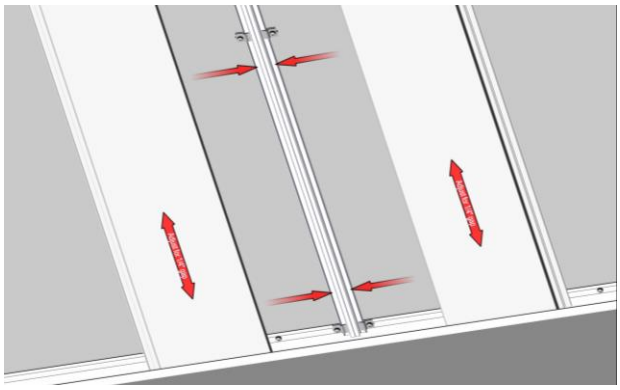
Step 1 - J-Track

Install J-Track or Two-Piece J-Track perpendicular to Planks (e.g.: sides of soffit areas), or around penetrations or cutouts. Fasten every 16" O.C. with #10 Pan Head Screws. Trims can be mitered for a clean corner look.



Step 2 - Back-to-Back Starter

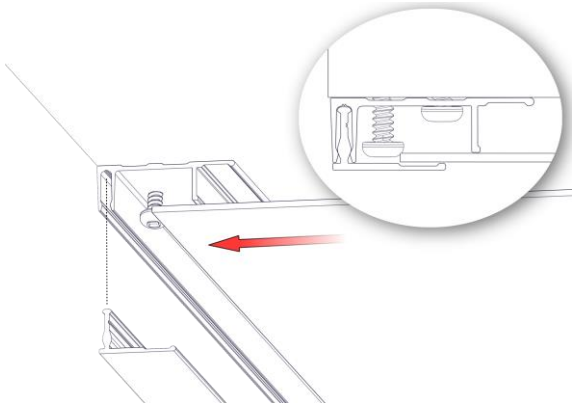
Install the Back-to-Back Starter at the center of areas to achieve equal width ends. Fasten both sides every 16" O.C. max with Quick Screen Clips & #10 Pan Head Screws. Alternatively, use Starter Strip at the edge of soffit(s).



Step 3 - Planks

Cut off Taped/Drilled plank ends. (1/2" each end).

Place the planks onto the tongue of the Back-to-Back Starter, fully engaging tongue. Fasten with Quick Screen Clips & #10 Pan Head Screws @32" O.C. max spacing (See Tables 3-6 for wind loading). Hard fasten only one point preferably near the center of each plank. It is good practice to check your installation every 2-3 rows for level/plumb and flat or straight, for best results. Ensure there is sufficient room for expansion & contraction, also confirming component caps will cover.



Step 4 - Termination

Before the last Plank, install Termination Set base fastening 16" O.C. typ.

Confirm the trim component caps will cover the last Plank and adjust accordingly to the suit the profile. Where terminating cut planks, provide a positive stop approximately every 16" (406mm).

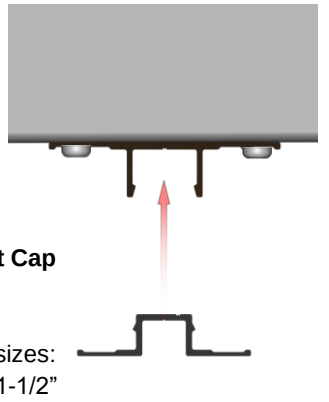
When all Planks are installed finish off the trims with caps from two-piece sets.

Finishing Steps - Once planks are installed, finish off the perimeter trims with caps from two-piece sets.

Component Caps

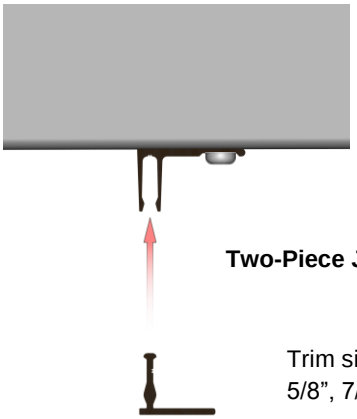
Location: Installed onto the base of the two-piece sets.

Details: If required, use a rubber mallet or hammer and block to protect the finish during this process.



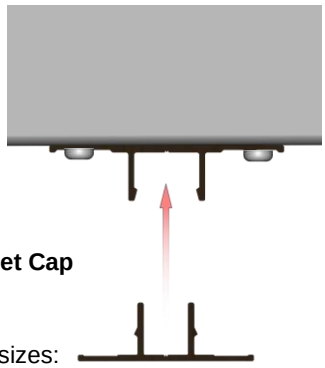
U-Reveal Set Cap

Trim sizes:
3/4”, 1-1/2”



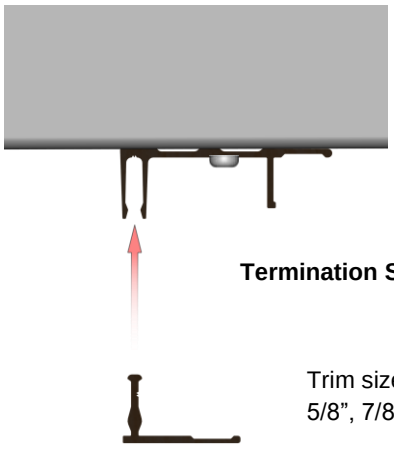
Two-Piece J-Track Cap

Trim sizes:
5/8”, 7/8”, 1-3/8”



Flat-Reveal Set Cap

Trim sizes:
3/4”, 1-1/2”



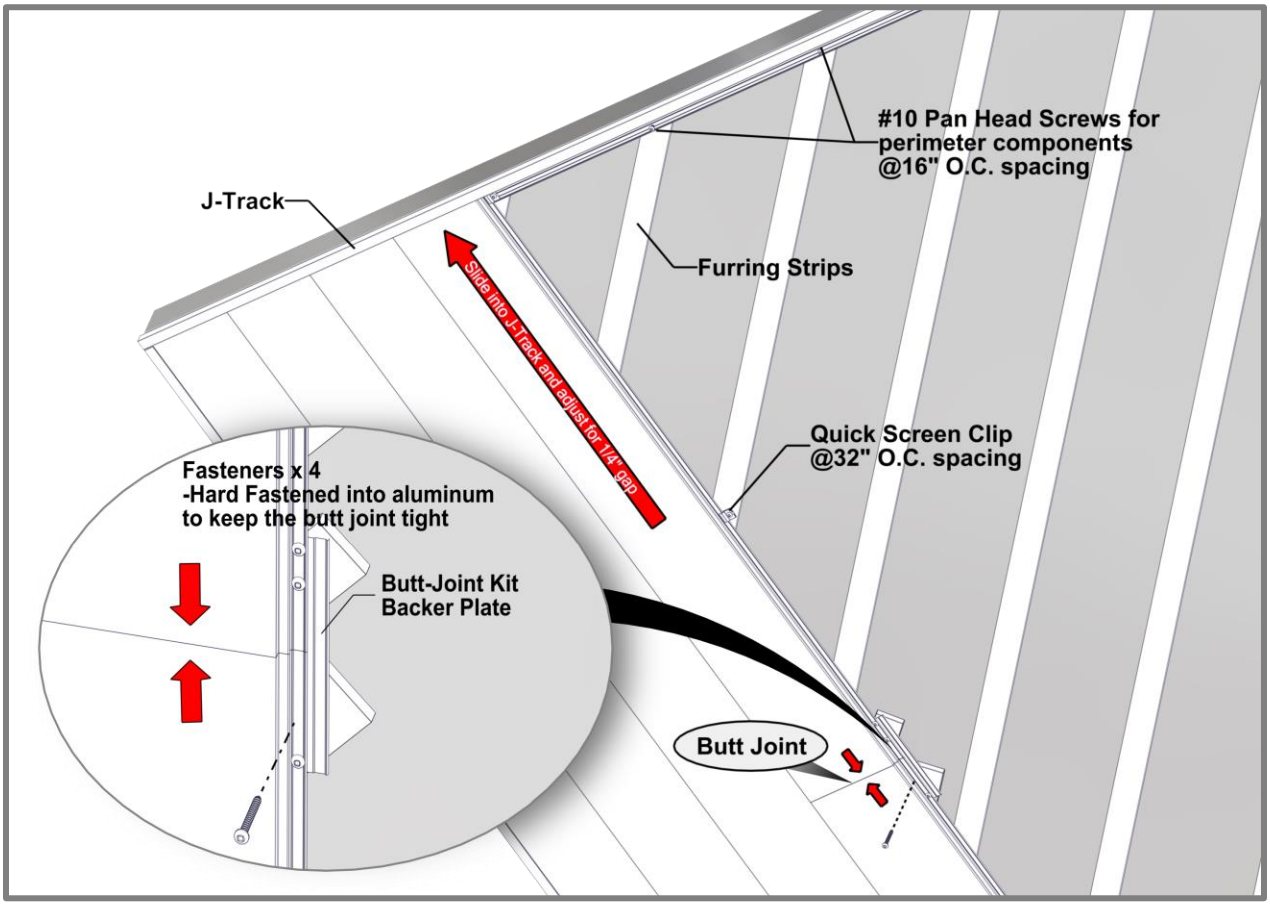
Termination Set Cap

Trim sizes:
5/8”, 7/8”, 1-3/8”

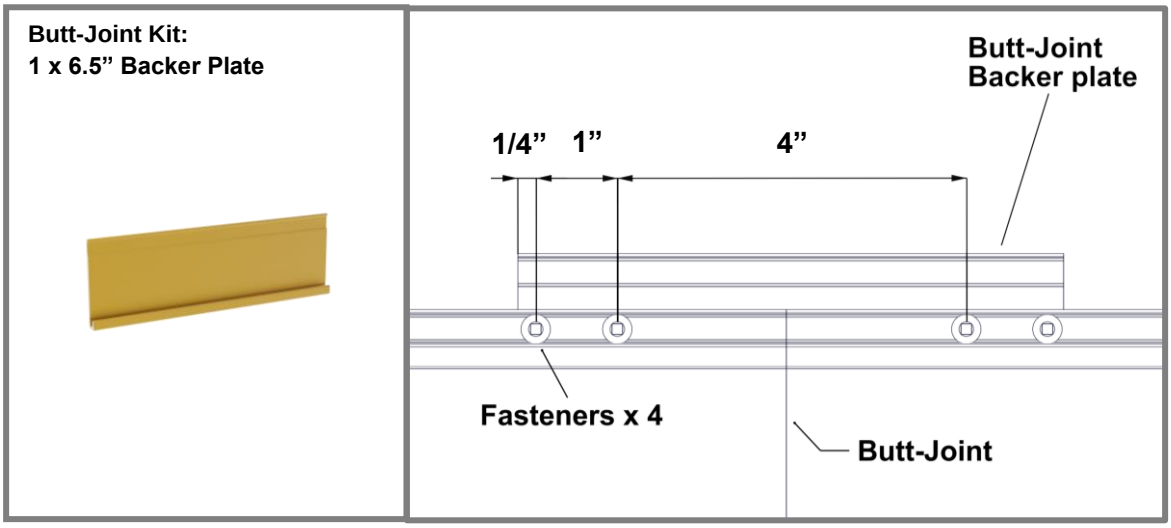
Details

Single Butt-Joints

- Consider using butt-joints along runs to minimize waste.
- ⚠ When installing staggered butt-joints, use the Butt-Joint Fastening Kit to ensure joints do not open up **(See Detail A)**
  Fasteners should be placed at the uppermost location of the plank flange, to not interfere with the next plank engaging the tongue and groove properly. At the butt-joint, fasteners should be anchored into the Butt-Joint backer plate.
  (See Detail B)
- Rivets can be used for single butt-joints, however clearance of the rivets and room for movement is required.
- On exposed cuts such as butt-joints, trim ends or similar, use touch-up paint pens (purchased separately) to finish the ends of the two (2) planks at the butt-joint.
- DO NOT hard-fasten a plank to a component trim, as this will restrict its ability to expand & contract into the component.
- If no butt joints along the length, it is good practice to hard-fasten each plank directly through the flange near the center, to keep the planks from migrating.
- DO NOT hard-fasten more than one (1) location per plank.
- Hard fasten at the butt-joint or the center of each plank run.



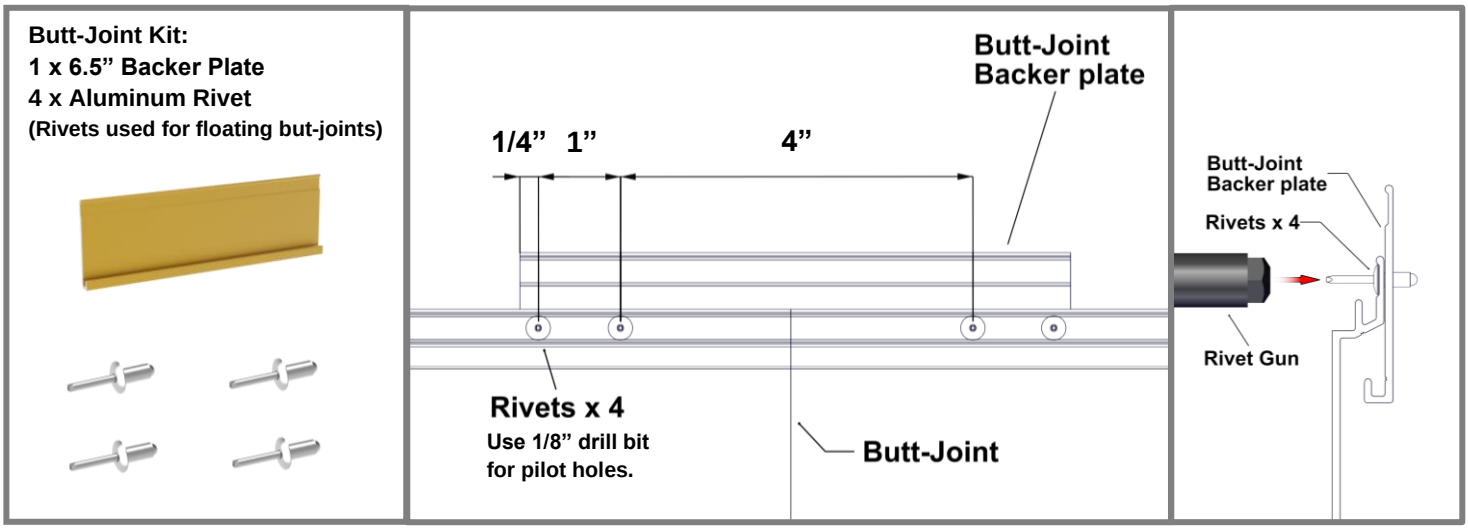
Detail A



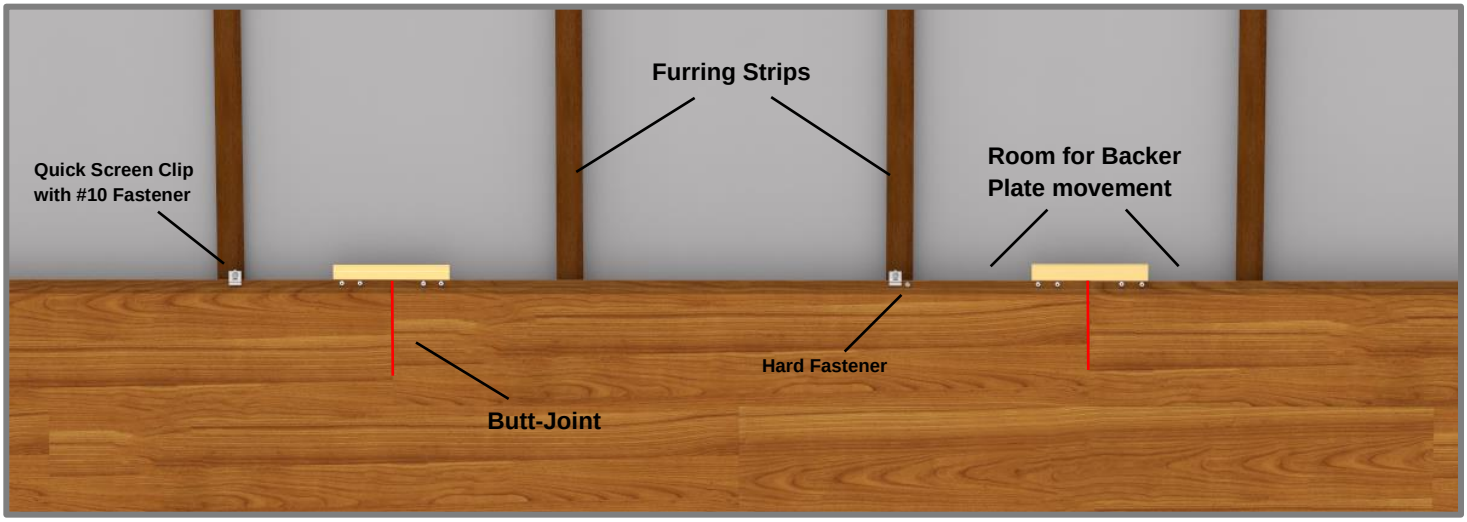
Detail B -Backer Plate (Hard Fastened)

Multiple Floating Butt-Joints

- ⚠ When installing staggered multiple floating butt-joints, use the Butt-Joint Fastening Kit to ensure joints do not open up. Rivets should be placed at the center of the plank flange, to not interfere with the next plank engaging the tongue and groove properly. **(See Detail C)**
- MUST HAVE furring strips or girts to allow room for movement.
- Recommended to be installed between furring strips or framing members to avoid contact which would restrict movement. **(See Detail D)**
- On exposed cuts such as butt-joints, trim ends or similar, use touch-up paint pens (purchased separately) to finish the ends of the two (2) planks at the butt-joint.
- DO NOT hard-fasten a plank to a component trim, as this will restrict its ability to expand & contract into the component.
- DO NOT hard-fasten more than one (1) location per multiple plank run.
- Hard fasten near the center of the multiple plank run.



Detail C -Floating Butt-Joint



Detail D -Butt-Joint Movement

MASONRY - CMU**	Grout-filled block per ASTM C-90, min. 2000 psi		1"	2"

**For Concrete and Masonry/CMU; Furring Strips are recommended, where possible

GENERAL NOTES:

1. Adequacy of the structural stud framing (wood and/or metal) and concrete/masonry as a main wind force resiting system capable of withstanding and transferring applied product loads to the foundation is the responsibilty of the engineer or architect of record for the project of installation.
2. Substrate shall be designed and anchored to properly transfer all loads to the structure buck design and installation is the responsibilty of the engineer or architect of record for the project of installation.
3. The installation details described herein are generic and may not reflect actual conditions for a specific site. If site conditions cause installation to deviate from the requirements detailed herein, a licensed engineer or architect shall prepare site specific documents for use with this document.
4. An unfactored dead load of 1.5 psf was assumed for the cladding.

INSTALLATION NOTES:

1. One (1) installation anchor is required at each Quick-Screen Clip location. Minimum of two (2) anchors per plank.
2. Spacing is from clip/fastener center to center.
3. The number of installation anchors per the table is the minimum number of anchors to be used for product installation.
4. Install individual installation anchors within a tolerance of +/- 1/2" of the specified spacings. Tolerances are not cumulative from one installation anchor to the next.
5. If fastening to every second stud, the attachment stud shall be staggered between adjacent runs of cladding.
6. Minimum embedment and edge distance exclude wall finishes, including but not limited to wood furrings, stucco, foam, brick veneer, sheathing and siding.
7. Installation anchors and associated hardware must be made of corrosion resistant material or have a corrosion resistant coating. Common fastener types can be equal or better to a & b listed below:
    a. Zinc plated fasteners for moderate climate zones
    b. 316 Stainless Steel fasteners for coastal climate zones
8. For CMU grout filled block, do not install installation anchors into mortar joints. Edge distance is measured from free edge of block or edge of mortar joint into face shell of block.
9. Installation anchors shall be installed in accordance with anchor manufacturer's installation instructions, and anchors shall not be used in substrates with strengths less than the minimum strength specified by the anchor manufacturer.

Table 4 - Fastener to Sheathing (2-1/2” Planks)

V1.1

FASTENER TO WOOD SHEATHING SPACING - WIND LOAD

2-1/2" PLANKS		PSF (Factored / Ultimate)										
		20	30	40	50	60	70	80	90	100	110	120
QUICK-SCREEN CLIP SPACING (IN)	24"											
	32"											
Plank Profile: 2-1/2" V-Groove												

TRIM COMPONENTS*		PSF (Factored / Ultimate)										
		20	30	40	50	60	70	80	90	100	110	120
	16"											

*Starter Strip requires Two (2) installation anchors at each fastener location: 1 Quick-Screen Clip + 1 Mid-Point slotted hole

Calculations are using L/60 deflection limits

SUBSTRATE TYPE	SUBSTRATE REQUIREMENTS	ANCHOR DESCRIPTION	MIN. SCREW LENGTH	MIN. EMBEDMENT	MIN. EDGE DISTANCE
7/16" OSB/PLYWOOD	APA rated sheathing or better	#10 Pan Head Wood Screw	1"	7/16"	1"

GENERAL NOTES:

1. Substrate shall be designed and anchored to properly transfer all loads to the structure buck design and installation is the responsibilty of the engineer or architect of record for the project of installation.
2. The installation details described herein are generic and may not reflect actual conditions for a specific site. If site conditions cause installation to deviate from the requirements detailed herein, a licensed engineer or architect shall prepare site specific documents for use with this document.
3. An unfactored dead load of 1.5 psf was assumed for the cladding.

INSTALLATION NOTES:

1. One (1) installation anchor is required at each Quick-Screen Clip location. Minimum of two (2) anchors per plank.
2. Spacing is from clip/fastener center to center.
3. The number of installation anchors per the table is the minimum number of anchors to be used for product installation.
4. Install individual installation anchors within a tolerance of +/- 1/2" of the specified spacings. Tolerances are not cumulative from one installation anchor to the next.
5. Installation anchors and associated hardware must be made of corrosion resistant material or have a corrosion resistant coating. Common fastener types can be equal or better to a & b listed below:
   a. Zinc plated fasteners for moderate climate zones
   b. 316 Stainless Steel fasteners for coastal climate zones
6. Installation anchors shall be installed in accordance with anchor manufacturer's installation instructions, and anchors shall not be used in substrates with strengths less than the minimum strength specified by the anchor manufacturer.

Craftsman J-Track (7/8")	38' (11.6m)	N/A	20' (6.1m)	20' (6.1m)
Craftsman Two-Piece J-Track w. J-Base	20' (6.1m)	N/A	8' (2.44m)	8' (2.44m)
Craftsman Termination Set	N/A	12' (4.57m)	N/A	N/A
Traditional Two-Piece J-Track w. J-base	38' (11.6m)	N/A	8' (2.44m)	8' (2.44m)
Traditional Termination Set	N/A	12' (4.57m)	N/A	N/A
PLANKS	**Minimum Radius**			
2 1/2" V-Groove	N/A	12' (4.57m)	**1.5' (0.46m)**	**2' (0.61m)**
2 1/2" V-Groove Perforated	N/A	12' (4.57m)	**1.5' (0.46m)**	**2' (0.61m)**
4" V-Groove	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
6" V-Groove	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
6" Channel	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
6" Smooth Plank	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
6" V-Groove Perforated	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
6" Smooth Plank Perforated	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
4" Castellation	N/A	12' (4.57m)	3' (0.91m)	6' (1.83m)
8" Castellation	N/A	12' (4.57m)		
6" Triple Bevel	N/A	19' (5.8m)	3' (0.91m)	6' (1.83m)
8" V-Groove	N/A	12' (4.57m)		

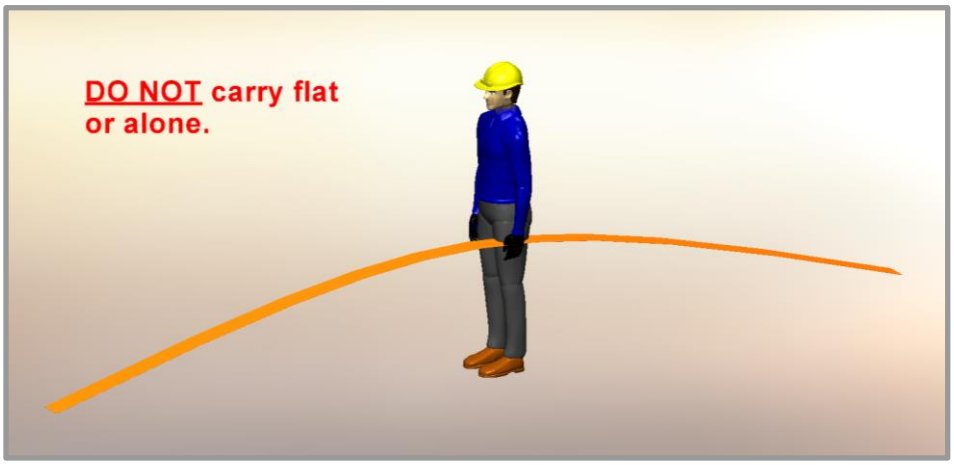
Note 1: When considering tight radii bends, use Non-Tempered Trim components for the minimum radius.

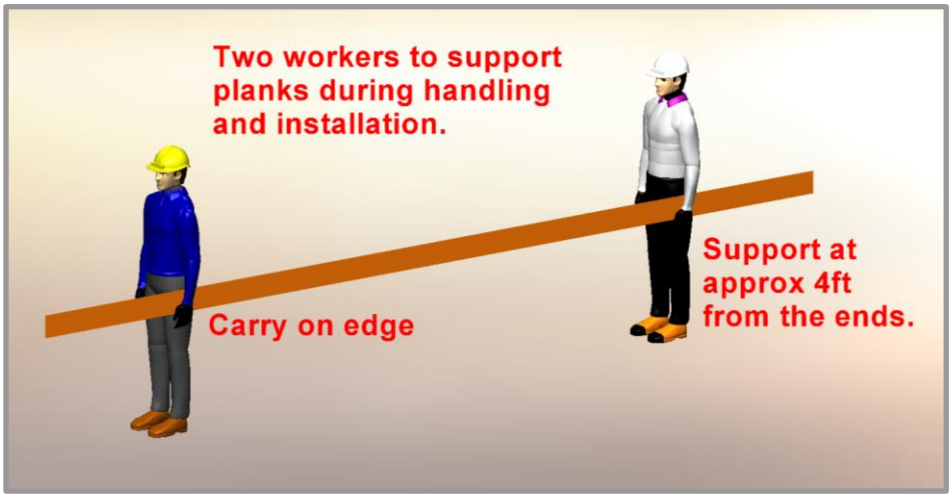
Note 2: When bending and securing components, bend against solid secure object and take care not to over bend.

*Note 3: Starter Strip meets or exceeds the performance of all the listed application and limitations.

Proper Handling of Longboard Products

To help avoid injury and product damage, Longboard products require proper handling to and from storage areas during installation. When carrying or installing any products it is recommended that they be moved or carried by at least two people with each support point approximately 4ft from the ends. **Carrying products without proper support can cause excessive bending which may damage the appearance or finish of the product.** Any short cut lengths should also be carried on edge while supporting the material. See below for details.





⚠ Delivery, Storage & Handling ⚠

- Always inspect the delivery for damage and contact LB ASAP if there are any issues: info@longboardproducts.com or 1-800-604-0343 and include your PO# and any pictures if possible. Longboard is not responsible for the installation of blemished or damaged material.
- Be sure to store the material flat, keep it dry, safe & secure and remain in unopened cartons until ready to be installed.
- Always wear appropriate PPE when handling products.
